Submission Date: 17th November 2025

ABSTRACT

This analytical project explores India's electoral trends from 2009 to 2024 and forecasts national voting behaviour up to 2040 using Power BI. The study combines multiple authentic public datasets sourced from the ***Election Commission of India (ECI****), including Voter Information Reports, Female Electors & Participation Reports, and Turnout & NOTA summaries. These datasets were integrated, cleaned, transformed, and modeled to build a unified analytical dataset titled Final Dataset, containing attributes such as electors, voters, turnout%, NOTA%, gender gaps, and state/UT-level distributions.*

The primary objective was to uncover gender participation trends, regional variations, turnout fluctuations, the rise of third-gender voting, and NOTA usage patterns. Advanced DAX measures were used to compute national-level metrics, gender-specific percentages, forecasting indicators, and regional comparisons. Power BI visualizations—line charts, bar charts, KPI indicators, donut charts, and predictive trendlines—help stakeholders interpret nationwide political engagement patterns.

The study concludes with long-term electoral forecasting (2025–2040), offering insights into possible future turnout, female participation, and NOTA decline. The dashboard provides policymakers, researchers, and citizens with a transparent, data-driven view of how India votes—and how it may vote in the coming decades.

INTRODUCTION:

Elections in India are among the largest democratic exercises globally, making electoral data critical for understanding political participation, gender inclusivity, and regional governance. This report focuses on analyzing Indian General Election data across four major election years: **2009, 2014, 2019, and 2024**. The domain selected—electoral analytics—holds major relevance for public policy, social research, political strategy, women empowerment, and electoral reforms.

NEED OF THE ANALYSIS:

India lacks a single consolidated dataset that provides a unified view of turnout, gender participation, third-gender inclusion, and NOTA trends. Every election year has multiple separate ECI reports, each with different formatting and missing values.
This fragmentation creates challenges in:

- Comparing elections across years
- Analyzing gender voting gaps
- Understanding state-level vs. national-level patterns
- Identifying regional anomalies (e.g., low turnout UTs, high-performing Northeastern states)
- Forecasting future electoral behavior

Visualization through Power BI bridges this gap by transforming raw numbers into actionable insights. Stakeholders—including policymakers, political analysts, and researchers—can now observe historical trends, regional asymmetries, and the evolution of voter participation.

MOTIVATION BEHIND CHOOSING THIS AREA:

The motivation stems from the rising importance of:

- Gender equality (SDG 5) — Understanding female political participation
- Reduced inequalities (SDG 10) — Assessing turnout gaps across regions
- Peace, justice, and strong institutions (SDG 16) — Transparent electoral analytics

India's growing focus on women voters, youth participation, and regional inclusivity also inspired this project.
The real-time reports used were sourced directly from the **Election Commission of India**, including:

- General Election Statistical Reports
- Elector Gender Breakdown Reports
- Voter Turnout Reports
- Female Participation Data
- NOTA Data Reports

Dataset Link:
Dataset taken from official Indian Government website (Election Commison)

Dataset Link- Dataset

OBJECTIVES OF THE ANALYSIS:

- To analyze nationwide trends in turnout%, gender participation, and NOTA usage across four election cycles.
- To compare voting patterns across states, Union Territories, Northeast “Seven Sisters,” and Jammu & Kashmir.
- To compute gender-specific and national-level KPIs using DAX for advanced insights.
- To forecast India’s future electoral behavior (2025–2040) using Power BI predictive analytics.

REPORT DETAILS:

Source: Election Commission of India (ECI)

- Dataset Used-
  2009-
    - Voter Information
    - Participation Of Female Participants
- 2014-
    - Voter Information
    - Participation Of Female Participants
    - Statewise Turnout%
- 2019-
    - Voter Information
    - Participation Of Female Participants
    - Statewise Turnout%
- 2024-
    - Voter Information
    - Participation Of Female Participants
    - Statewise Turnout%

DATA PROCESSING STEPS:

A.Data Extraction

Four major datasets were manually extracted:

- **2009:** From voter information + female participation reports
- **2014, 2019, 2024:** Created by merging
    - Voter information
    - Female participation dataset
    - Turnout% dataset

B. Data Cleaning

- Removed blank rows, repeated headers
- Standardized state names (e.g., Jammu and Kashmir → Jammu & Kashmir)
- Formatted numeric fields
- Removed unnecessary attributes (e.g., NRI, Service Voters, Tendered Votes)
- Ensured consistent columns across all four datasets
- Added Year column manually

C. Data Modeling

C.1

After cleaning, all four datasets were appended to form a single table: Final Dataset.
DAX measures were created for

- Gender Gap%
- JK Share of National Votes %

- JK Total Votes
- National Female Voter %
- National Female Voter Share %
- National Male Voter %
- National NOTA%
- National Total Votes
- National Turnout%
- UT with Lowest Female Voter%
- UT with Lowest Turnout%

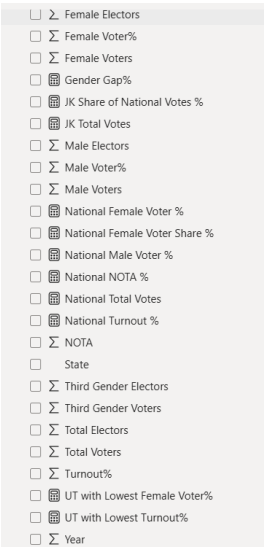

C.2.

Added Custom Columns

- Male Voter%
- Year

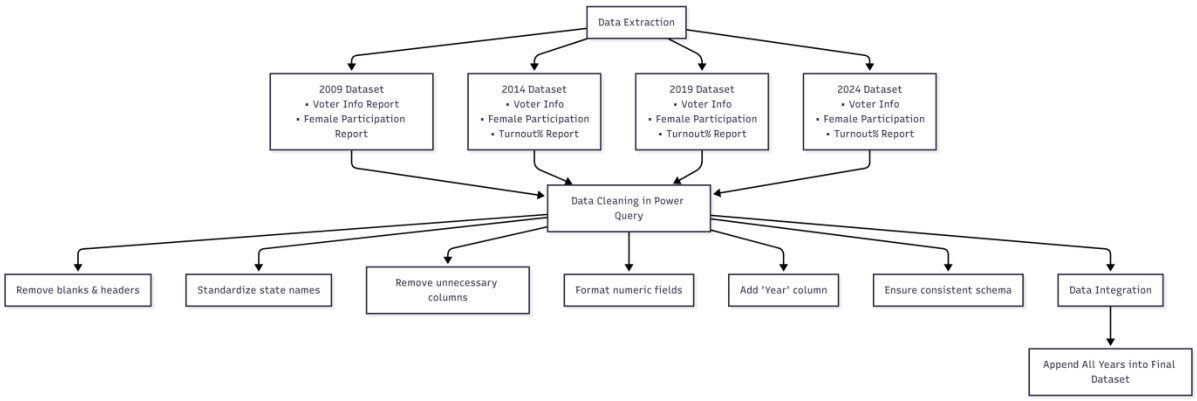

C.3

Final Dataset Attributes

Built the data model for trend projections up to **2040**.

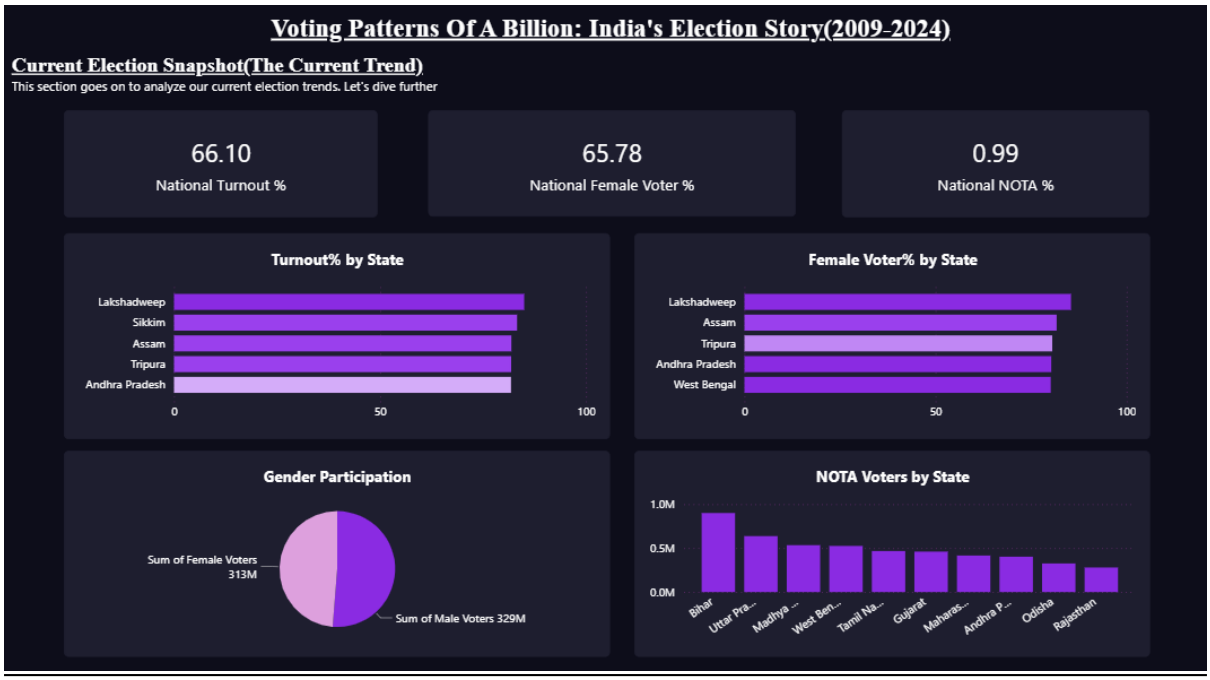

Flowchart ->

ANALYTICAL GRAPHS & INTERPRETATION:

Our Dashboard for analysis was divided into 7 sections that are-

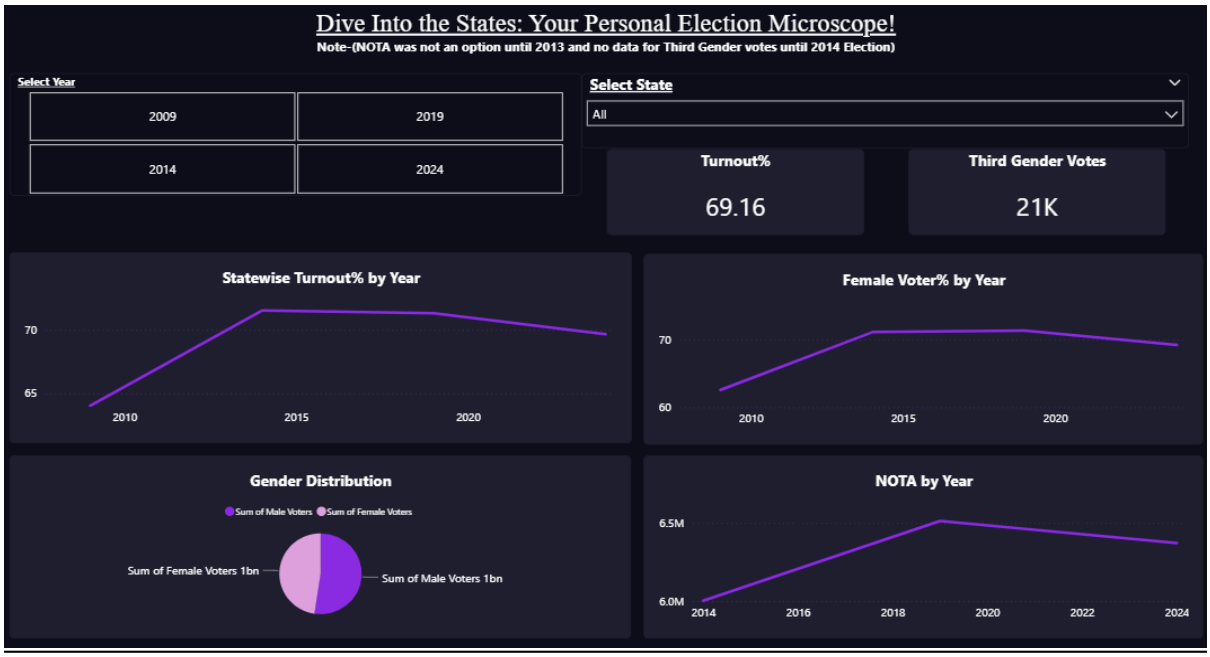

1. Current Election Snapshot (2024):

This dashboard presents a quick national snapshot of India's electoral landscape from 2009–2024. The National Turnout% (66.10%) and National Female Voter% (65.78%) show strong participation and a narrowing gender gap, while NOTA usage remains low at 0.99%, signaling overall voter satisfaction. States like Lakshadweep, Sikkim, Assam, Tripura, and Andhra Pradesh stand out with exceptionally high turnout and female voter percentages, highlighting strong civic engagement in these regions.

The gender participation chart shows near balance between male (329M) and female (313M) voters, indicating significant progress toward electoral parity. The NOTA distribution reveals higher volumes in large states such as Bihar, Uttar Pradesh, and Madhya Pradesh, mainly due to their population size. Overall, the snapshot reflects healthy engagement, rising female participation, and stable public sentiment across India.

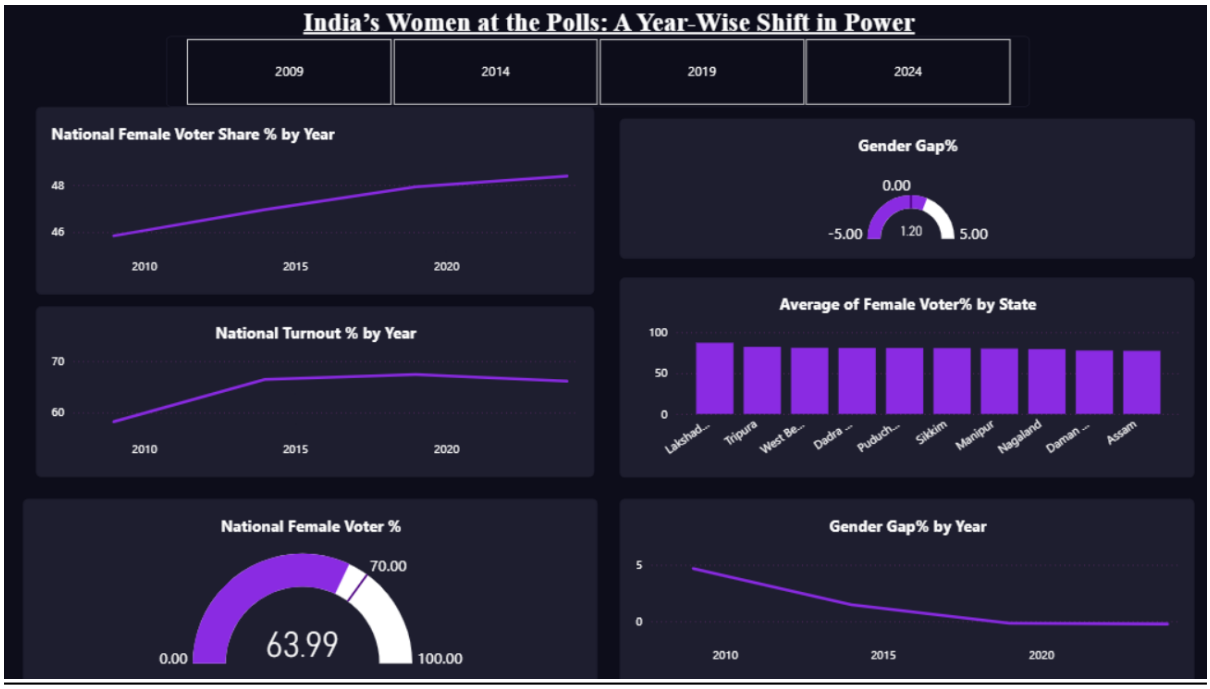

2. **Dive Into the States: Your Personal Election Microscope:**

This dashboard provides a state-level deep dive into India's voting trends across election years. The Turnout% and Female Voter% line charts show how participation fluctuates across 2009–2024, with 2014 remaining a peak year for both metrics before a slight decline in 2019. The presence of a year slicer and state filter allows users to analyze variations across different regions, while the KPI cards instantly highlight current turnout and third-gender voter counts, giving a quick snapshot of the electorate's inclusivity.

The Gender Distribution pie chart reveals the overall balance between male and female voters, while the NOTA by Year line chart tracks how voter dissent has evolved since the introduction of NOTA in 2013. Together, these visuals create a comprehensive state-wise view of participation, engagement, and gender representation—making this page essential for understanding the nuanced patterns behind India's democratic behaviour.

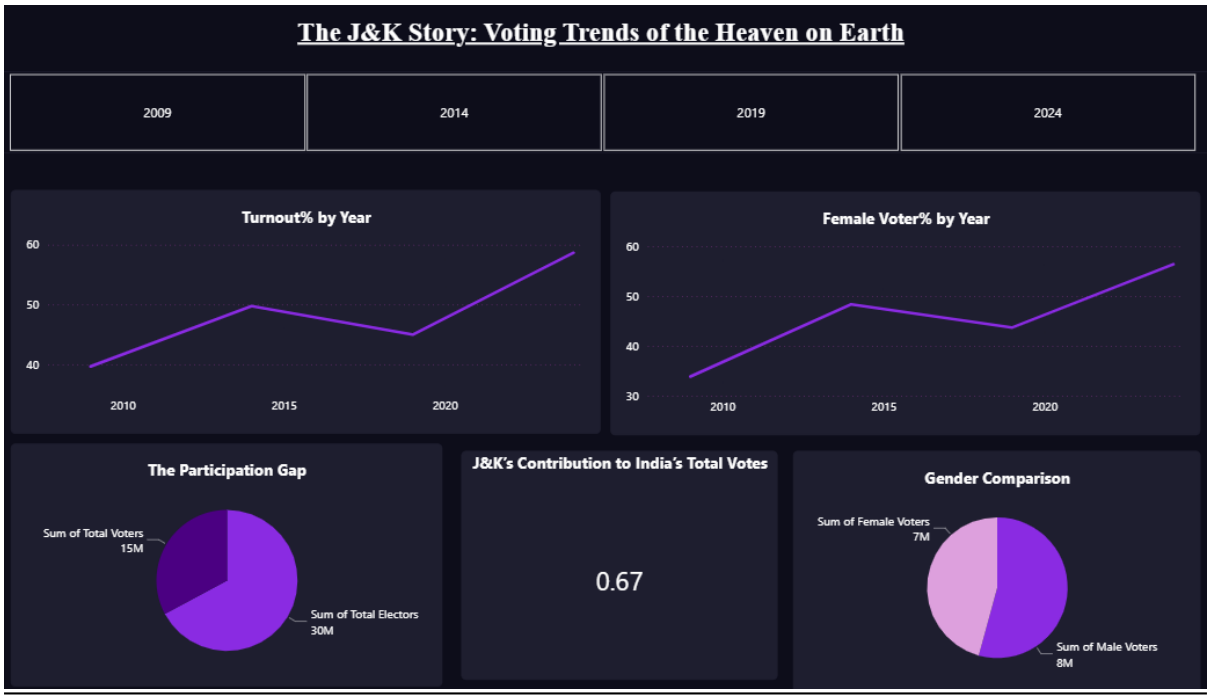

3. India’s Women at the Polls: A Year-Wise Shift in Power:

India’s women voters have shown a steady rise in participation between 2009 and 2024, reflected in both National Female Voter Share % and National Female Voter %. The female share of the total votes has grown gradually, indicating a narrowing gender gap in democratic engagement. The gender gap gauge and year-wise line chart confirm that the difference between male and female turnout has reduced significantly over time, approaching near-parity by 2024. This reflects growing political awareness, increased voter mobilization, and stronger institutional support for women’s participation.

Across states, the Average Female Voter % by State shows that regions like Lakshadweep, Tripura, and West Bengal consistently lead in empowering female voters. The donut gauge emphasizes the current national female turnout rate, while the historical Gender Gap% by Year visually reinforces the long-term convergence of male and female participation. Overall, the dashboard highlights a positive upward shift in women’s electoral influence and showcases how female voters are becoming a central force in shaping India’s elections.

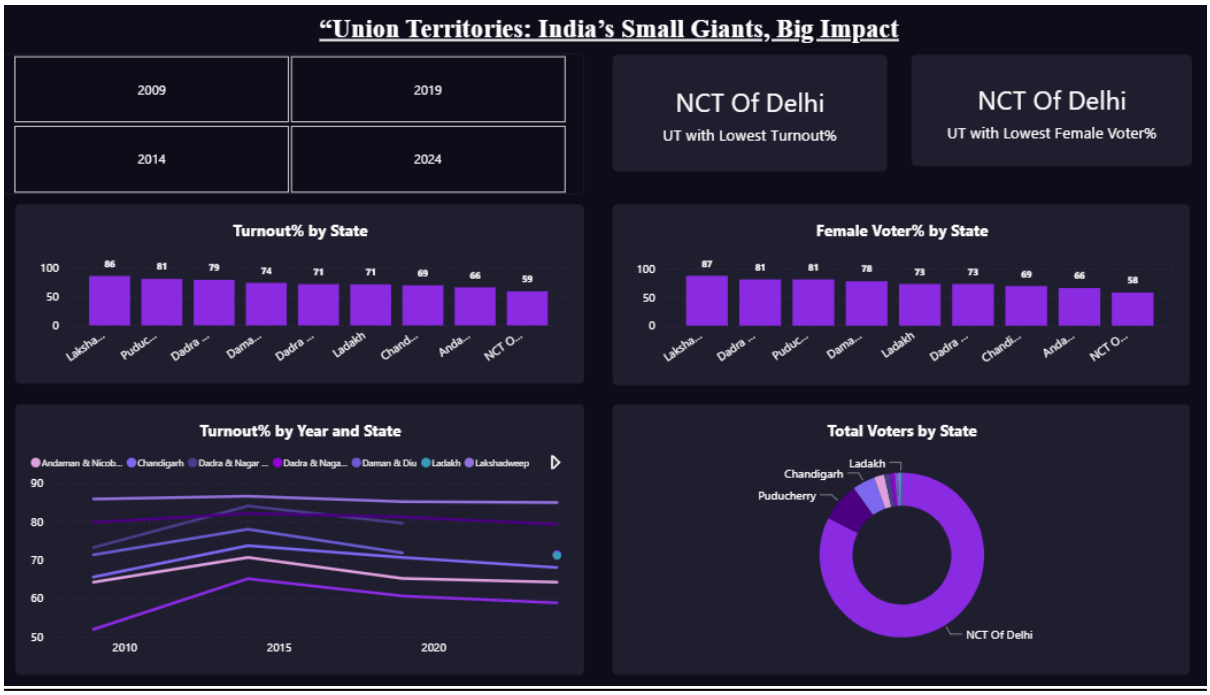

4. The J&K Story: Voting Trends of the Heaven on Earth:

Jammu & Kashmir's voting patterns reveal a region recovering and reshaping its democratic engagement over time. The turnout% line chart highlights a fluctuating—but gradually rising—participation rate, culminating in a strong surge in 2024. Female voter turnout follows a similar trend, showing that women in J&K are increasingly participating in elections, especially post-2019. Together, these metrics point to a political environment that is becoming more inclusive and active despite past disruptions.

The participation gap visualization highlights a notable difference between electors and voters, indicating untapped democratic potential. J&K's share in India's total votes remains small due to population size, but the gender comparison pie chart shows near-balanced participation between men and women. This blend of growth, fluctuation, and inclusivity paints a picture of a region where electoral engagement is strengthening year by year.

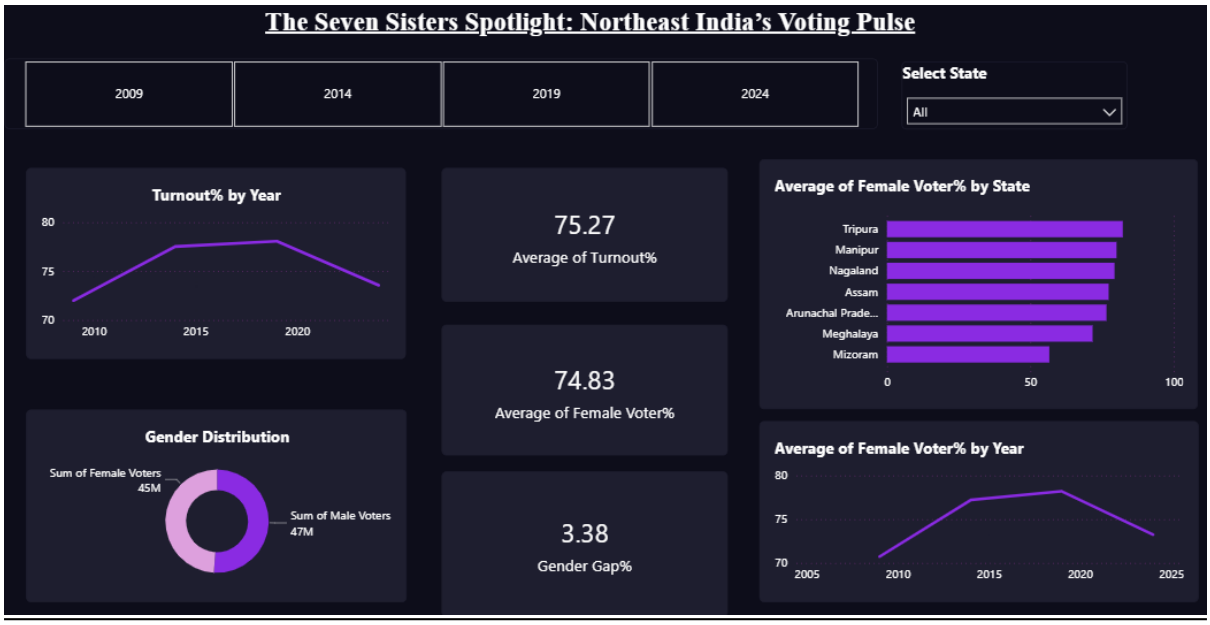

5. “Union Territories: India’s Small Giants, Big Impact:

This dashboard showcases how UTs, despite their smaller populations, exhibit some of the highest turnout levels in India. Lakshadweep, Puducherry, and Daman & Diu consistently stand out with turnout rates above national averages. Conversely, NCT of Delhi shows the lowest turnout and lowest female voter%, revealing a stark contrast within UTs themselves. The female voter% bar chart further emphasizes how smaller territories often demonstrate stronger gender-balanced participation compared to urban Delhi.

The multi-year turnout trendline shows strong consistency among UTs, with only slight dips over time. The “Total Voters by State” donut chart highlights NCT of Delhi’s numerical dominance due to its population, even though it lags in turnout. Together, the visuals show that UTs are diverse: some outperform India in civic participation, while others, especially Delhi, show significant room for improvement.

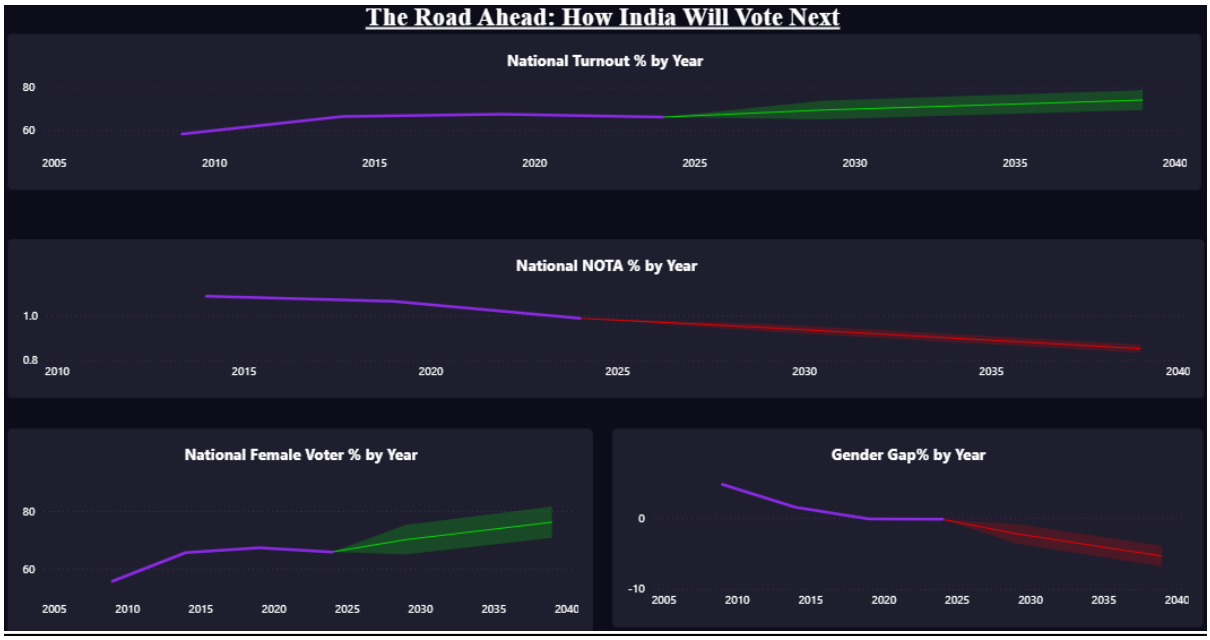

6. The Seven Sisters Spotlight: Northeast India's Voting Pulse

The Seven Sisters demonstrate some of the strongest democratic participation in India, with turnout% frequently crossing 75%. States like Tripura and Manipur lead both in overall turnout and female voter%, indicating deep civic engagement and a strong tradition of women's involvement in electoral processes. The turnout trendline illustrates consistently high participation, with the 2014–2019 period showing peak engagement before a slight dip in 2024.

The gender distribution charts reveal near-equal participation between male and female voters, reinforcing the Northeast's reputation for gender inclusivity and active representation. The bar chart comparing female voter% across states shows Tripura and Nagaland as top performers. Overall, the dashboard highlights the Northeast as a region where voters—especially women—play a pivotal role in strengthening India's democratic fabric.

7. **The Road Ahead: How India Will Vote Next**

The forecasting visuals project India's electoral behaviour up to **2040**, showing a gradual rise in national turnout driven by expanding voter awareness and participation initiatives. The forecasted green zone indicates a likely upward trend from ~67% in 2024 to nearly 75% by 2040. In contrast, NOTA% shows a steady decline, suggesting improved voter satisfaction with candidates or reduced protest voting in future elections.

Female voter% is projected to grow significantly, with forecasts crossing 80% in certain scenarios—highlighting a powerful rise in women's participation. Meanwhile, the gender gap% trendline moves into the negative zone, suggesting that women may soon outperform men in voter turnout. This page collectively signals a future where elections become more participative, more gender-balanced, and more representative.

FURTHER SCOPE OF WORK:

The current analysis offers a comprehensive view of India's electoral patterns from 2009 to 2024 with forecasting up to 2040. However, the study can be expanded significantly in the future. First, integrating **constituency-level data** rather than state-level aggregates would enable micro-analysis of regional variations, voter clusters, and seat-wise performance. This would also allow modelling turnout at booth and demographic levels.

Second, demographic data such as **age, literacy, income, rural–urban split, and internet penetration** can be merged with voter behavior to uncover deeper drivers of participation, women's turnout, and NOTA usage. Advanced predictive modelling using **machine learning (Random Forest, ARIMA, LSTM)** may enhance forecasting accuracy beyond Power BI's built-in tools.

Third, incorporating **historical data before 2009**, including 1999–2004 Lok Sabha cycles, would strengthen long-term forecasts and help identify generational participation shifts. Social media sentiment or campaign-intensity datasets could also enrich insights into voter motivation.

Finally, the dashboard can be extended into an interactive decision-support tool by adding **what-if simulations**, **state-level forecasting**, and automated **Python-driven anomaly detection** to help policymakers and election researchers evaluate future voter trends more accurately.

CONCLUSION:

This study provides a comprehensive analytical view of India's electoral landscape from 2009 to 2024, supported by a unified dataset created through extensive data extraction, cleaning, modeling, and DAX-based computation. By integrating voter information, gender-wise participation, and turnout indicators, the project reveals clear patterns in India's evolving democratic participation. The dashboards illustrate rising female voter engagement, narrowing gender gaps, fluctuating state-level turnout behaviors, and the voting distinctiveness of regions such as Jammu & Kashmir, Union Territories, and the Seven Sisters of the Northeast.

The forecasting models, extended up to 2040, highlight the likely continuation of key trends—moderate growth in national turnout, increasing female voter participation, and a gradual decline in NOTA usage. These forward-looking insights offer meaningful value for policymakers, election researchers, and sociopolitical analysts seeking to understand India's future voting dynamics.

Overall, this project demonstrates how data analytics and visualization can transform fragmented public datasets into actionable insights. It reinforces the growing importance of evidence-based decision-making and sets the foundation for deeper, more granular research in the years ahead.

DAX Queries Used-

1. Gender-Based Measures

- **Female Voter%** = DIVIDE(SUM('Final Dataset'[Female Voters]), SUM('Final Dataset'[Female Electors])) * 100
- **Male Voter%** = DIVIDE(SUM('Final Dataset'[Male Voters]), SUM('Final Dataset'[Male Electors])) * 100

2. National-Level Indicators

- **National Turnout %** = DIVIDE(SUM('Final Dataset'[Total Voters]), SUM('Final Dataset'[Total Electors])) * 100
- **National Female Voter %** = DIVIDE(SUM('Final Dataset'[Female Voters]), SUM('Final Dataset'[Female Electors])) * 100
- **National NOTA %** = DIVIDE(SUM('Final Dataset'[NOTA]), SUM('Final Dataset'[Total Voters])) * 100

3. Gender Share

- **National Female Voter Share % =** DIVIDE(SUM('Final Dataset'[Female Voters]), SUM('Final Dataset'[Total Voters])) * 100

4. Gender Gap Calculation

- **Gender Gap%** = [Male Voter%] - [Female Voter%]

5. Special Region Measures (J&K Example)

- **JK Total Votes** = CALCULATE(SUM('Final Dataset'[Total Voters]), 'Final Dataset'[State] = "Jammu & Kashmir")
- **JK Share of National Votes % =** DIVIDE([JK Total Votes], CALCULATE(SUM('Final Dataset'[Total Voters]))) * 100

6. UT Rankings (Lowest Turnout Example)

UT with Lowest Turnout% =

- CALCULATE(MIN('Final Dataset’[Turnout%]), 'Final Dataset'[State] IN {"NCT Of Delhi","Chandigarh","Ladakh","Puducherry","Lakshadweep","Daman Diu","Dadra & Nagar Haveli","Andaman & Nicobar Islands”})
